

Flange Buddy

The ideal aid for separating
piping flanges

saves time and money

FLANGE BUDDY

Application and Advantages

- Easy and safe mechanical separation of piping flanges.
- All parts manufactured with highest quality materials.
- **FLANGE BUDDY** is proven in international tests.

Operation instructions

Insert the **FLANGE BUDDY** in one of the bolt holes of a flange. Slip the bolt support plate, which is held by a chain, between the flange facings underneath the setscrew. Once the **FLANGE BUDDY** is jammed tight, continue turning with a wrench until a position is reached where a gasket can be replaced or a spade set. Then, slacken back the setscrew to the point where the support plate can be removed, and tap the setscrew with a hammer to free the **FLANGE BUDDY** from the bolt hole.

Recommend the use of two **FLANGE BUDDIES** in cases where the transfer of very great force is required. Insert the second **FLANGE BUDDY** in the corresponding hole of the companion flange. The force applied will act on the same support plate.

You will, thus, be able to apply heavy loads without risking damage to the support plate. Due to the flange proportions, it is not possible to increase the thickness of the support plate.

Do not load a plate on side while using great force!

Grease the threads well before using!

Warning:

To avoid serious injuries, never put your fingers between the separated flanges!

DIN Flange Dimensions (further sizes - upon request)

Type	Bolt hole (Ø mm)	PN 10 DN	PN 16 DN	PN 25 DN	PN 40 DN	PN 64 DN	PN 100 DN	PN 160 DN
